

# **STEM**

## **FIRST INDUSTRIAL INTERACTION**

Through STEM we are proud to submit that we have our first industrial interaction on hand. The project involves Energy/Pollution audit of Steel Rolling plants in Lahore. Industrial guidance is to be provided so as to the key requirements, challenges, opportunities and benefits to this industry and a detailed feasibility report along with implementable solution is to be given. The industrial liaison is one of the key aspects of STEM on which we are very focused and concerned. In this regard this project presents an excellent opportunity for research/thesis for Masters level students. The operational expenses shall be covered by the industry (including travelling, boarding, lodging etc...). Interested students/candidates please contact: Asst.Prof Muhammad Umer (Convener STEM);
